## Publishing Offices

Pergamon Press Ltd., Headington Hill Hall, Oxford, England

Pergamon Press Inc., 44-01 21st Street, Long Island City, N.Y. 11101

Published bi-monthly

Annual Subscription Rates

(A) For libraries, research establishments and all other multiple-reader institutions: £17.10s (\$50.00).

(B) For individuals who place their orders directly with the publisher and certify that the journal is for their personal use: £5 (\$15.00).

Back issues are available, write for Back Issues Price List.

24 RUE DES ECOLES, PARIS V<sup>e</sup>

## Contents of Volume 4

### January

<i>C. T. Liu, B. R. Das and P. H. Maurer:</i> Immunochemical studies of the tryptic, chymotryptic and peptic peptides of heat denatured bovine serum albumin	1
<i>J. B. Robbins, J. Haimovich and M. Sela:</i> Purification of antibodies with immunoabsorbents prepared using bromoacetyl cellulose	11
<i>Diane Griffin, D. K. Tachibana, B. Nelson and L. T. Rosenberg:</i> Contribution of tryptophan to the biologic properties of anti-dinitrophenyl antibody	23
<i>C. Merryman, B. Frangione, E. C. Franklin and B. Benacerraf:</i> Peptide differences in purified mouse antibodies	31
<i>L. Berrens:</i> A proposed mechanism for the inactivation of atopic allergens in dilute solution	37
<i>S. Sell:</i> Isolation and characterization of rabbit colostral IgA	49
Communications to the Editors	
<i>Per Brandtzaeg, Ivar Fjellanger and Sven T. Gjeruldsen:</i> Localization of immunoglobins in human nasal mucosa	57
<i>G. H. Wirtz and Shirley A. Westfall:</i> Immune complement of the opossum	61
First International Congress of the Transplantation Society	64

### March

<i>F. M. Dietrich:</i> Immunochemical analysis of rabbit antibodies against angiotensin II	65
<i>A. M. Olovnikov:</i> Sensitization of erythrocytes by polycondensed proteins of immune serum and their use for determining antigen content	77
<i>L. Berrens:</i> Fluorescence of atopic allergens	81
<i>S. Leskowitz:</i> Some relations between the specificity of antibody and delayed hypersensitivity	91
<i>B. Frangione, F. Prelli and E. C. Franklin:</i> The structure of Fd fragments of G myeloma proteins	95
<i>J. Gergely, D. R. Stanworth, R. Jefferis, D. E. Normansell, C. S. Henney and G. I. Pardoe:</i> Structural studies of immunoglobulins—I. The role of cysteine in papain hydrolysis	101
Communications to the Editors	
<i>Urs S. Rutishauser, Marvin B. Ritterberg and Dan H. Campbell:</i> Antibody recovery from immune precipitates of a reversibly dissociable antigen—hemocyanin	113
<i>B. Fairless, D. Hornish and A. H. Bartel:</i> Preliminary chemical investigations of carbohydrate associated with key-hole limpet hemocyanin (KLH)	116
<i>G. H. Wirtz:</i> Avian complement; duck complement and natural duck hemolysis	118
<i>S. Zappacosta and G. Rossi:</i> An improved method for radioiodination of $\gamma$ G-immunoglobulin	122
Announcement	126

## May

<i>William T. Shearer and Ray K. Brown</i> : Optical rotatory dispersion of peptides which inhibit the oxidized ribonuclease immune system	127
<i>Susan Zolla and Joel W. Goodman</i> : Immunochemical studies on cross-reactions of antipneumococcal sera—V. Cross-reactions of horse antipneumococcal type II serum with <i>E. coli</i> M-II polysaccharide, dextran and hemocyanin- <i>ortho</i> -azophenyl- $\beta$ -glucuronide	135
<i>W. F. Herbert</i> : The preparation of antigenically defined, conalbumin-free ovalbumin, by ion-exchange chromatography	143
<i>K. Rajewsky and Brigitte Müller</i> : Similar surface areas on acetylated lactic dehydrogenases	151
<i>M. Kitagawa, A. L. Grossberg, Y. Yagi and D. Pressman</i> : Separation of antibodies into fractions with different binding properties	157
<i>Sara Bauminger, I. Schechter and M. Sela</i> : Specificity of immunological tolerance to poly-DL-alanyl proteins	169
<i>Isobel Corneil and L. Wofsy</i> : Specific purification of equine anti-S11 antibodies by precipitation with a hemocyanin-glucuronide conjugate	183

## July

<i>W. B. Dandliker and R. Alonso</i> : Purification of fluorescein and fluorescein derivatives by cellulose ion exchange chromatography	191
<i>M. Kitagawa, A. L. Grossberg, Y. Yagi and D. Pressman</i> : Antibodies directed to singly and doubly charged forms of the <i>p</i> -azobenzenearsonate group	197
<i>G. E. Francis</i> : Antisera to covalently linked proteins	203
<i>Jiri Kraml and H. R. Mahler</i> : Biochemical correlates of respiratory deficiency—VIII. A precipitating antiserum against cytochrome oxidase of yeast and its use in the study of respiratory deficiency	213
<i>C. J. Brackenridge</i> : Amino-terminal studies of some pathological human serum immunoglobulins	227
<i>C. Vergani, R. Stabilini and A. Agostoni</i> : Quantitative determination of serum immunoglobulins by single radial immunodiffusion on cellulose acetate	233
<i>Edna Mozes, J. B. Robbins and M. Sela</i> : Heterogeneity of the light chains of rabbit immunoglobulin G fractions and of a series of antibodies directed towards antigens of differing complexity	239
<i>F. A. Green</i> : Erythrocyte membrane sulfhydryl groups and Rh antigen activity	247
<i>Fred Karush and Michael Sela</i> : Equine anti-hapten antibody—IV. The effect of polyalanylation on affinity	259

### Research Note:

<i>R. S. Nezlin and L. M. Kulpina</i> : Cellulose-fixed immunoglobulin subunits	269
---	-----

### Communication to the Editors

<i>G. Lamoureux, P. R. Carnegie and T. A. McPherson</i> : Experimental allergic encephalomyelitis—Properties of an iodinated encephalitogenic polypeptide	273
---	-----

## September

<i>R. B. Fritz, S. Lassiter and E. D. Day</i> : The effect of iodination on anti-fibrinogen antibodies with respect to precipitating and adsorption activities	283
--	-----

<i>W. B. Dandliker, R. Alonso and C. Y. Meyers</i> : The synthesis of fluorescent penicilloyl haptens and their use in investigating 'penicillin' antibodies by fluorescence polarization	295
<i>Martin I. Horowitz and Amalendu Das</i> : Immunochemistry of ovine and bovine submaxillary mucins	303
<i>H. M. Grey and C. A. Abel</i> : Structural characteristics of the Fc' fragment of human $\gamma$ G-Globulin	315
<i>Gail P. Mates and Sidney Shulman</i> : Studies on thyroid proteins—III. Precipitating activity of autoimmune and heteroimmune antisera with human thyroglobulin	319
<i>C. H. Schneider and A. L. de Weck</i> : The reaction of benzylpenicillin with carbohydrates at neutral pH with a note on the immunogenicity of hapten polysaccharide conjugates	331
<i>C. A. King</i> : Further studies on the adsorption of antibody by guinea pig lung and the subsequent fixation of antigen	345
<i>L. Korngold and K. Madalinski</i> : Sub-groups of G-myeloma globulins of type K and type L	353
Communication to the Editors	
<i>Roland von Fellenberg and Lawrence Levine</i> : Proximity of the enzyme active center and an antigenic determinant of lysozyme	363
Forthcoming Meetings	367
<i>November</i>	
<i>J. Gergely, G. A. Medgyesi and D. R. Stanworth</i> : Structural studies of immunoglobulins—II. The varying susceptibility to papain-digestion of a group of human myeloma $\gamma$ G-globulins	369
<i>C. Rivat, Liliane Rivat et C. Ropartz</i> : Propriétés physicochimiques et immunologiques des $\gamma$ G humaines modifiées—I. Action des anhydrides acétique, succinique et maléique	375
<i>Leif Wide, Rolf Axén and Jerker Porath</i> : Radioimmunosorbent assay for proteins. Chemical couplings of antibodies to insoluble dextran	381
<i>Norman R. Klinman and Fred Karush</i> : Equine anti-hapten antibody—V. The non-precipitability of bivalent antibody	387
<i>C. W. Todd and F. P. Inman</i> : Comparison of the allotypic combining sites on H-chains of rabbit IgG and IgM	407
<i>Louis G. Hoffmann and Paul Meier</i> : Statistical evaluation of reaction mechanisms in immune hemolysis—I. The dose response of the second component of complement	419
<i>R. M. E. Parkhouse and R. W. Dutton</i> : The effect of physical and chemical modifications on antigen in the secondary response <i>in vitro</i>	431
<i>B. Lisowska-Bernstein, M. E. Lamm, V. Nussenzweig and B. Benacerraf</i> : Differentiation of guinea-pig $\kappa$ and $\lambda$ light polypeptide chains by peptide mapping	441
<i>Peter H. Schur, Leonard A. Moroz and Henry G. Kunkel</i> : Precipitating antibodies to ribosomes in the serum of patients with systemic lupus erythematosus	447
<i>Gregory W. Siskind, William E. Paul and Baruj Benacerraf</i> : The use of radioactively labeled S III to study the blood clearance and the immune response of mice to pneumococcal polysaccharides	455

<i>Victor Ghetie: Fluoroimmuno-electrophoresis</i>	467
<i>Gail P. Mates and Sidney Shulman: Studies on thyroid proteins—V. Immuno-chemical heterogeneity of human thyroglobulin</i>	475
Communications to the Editors	
<i>Allan L. Grossberg: Summary of the Japan-U.S.A. conference on recent developments in immunochemistry</i>	485
<i>James T. Barrett and M. Susan Epperson: The activation of chymotrypsinogen and trypsinogen in the presence of antisera</i>	497
<i>Louis H. Muschel, Lissa A. Ahl and Richard Hong: Complement fixation with tissue antigens</i>	501
<i>Abraham Rimon, Dvora Teitelbaum, Sara Bauminger and Michael Sela: Immune response to multichain poly-DL-alanine</i>	505

## Aims and Scope

Immunochemistry involves the specialized disciplines of many fields of physical, biological and medical sciences. Most investigators who are interested in immunochemistry are specialists in one or more of these disciplines and, as a result, immunochemical literature appears in a wide variety of journals and other types of publications. The purpose of the Journal *Immunochemistry* is to eliminate the necessity for such dispersed publication by serving as a specific medium for material dealing with the chemical and physical aspects of immunology and related problems. The Journal is not intended to replace any of the present journals dealing with general immunology but is to be more specifically a chemical journal dealing with antigens and antibodies, physical aspects of immune mechanisms and methodology or investigations related to such subjects.

Four types of articles will be published. The first major type will be original experimental investigations that have not been previously published and that can be considered as complete rather than preliminary reports. Full length papers of theoretical material will also be considered for publication. The second type will be Communications to the Editors and will be limited to space which is equivalent to about 1000 words including tables, figures or illustrations. These may be preliminary reports of original work (not abstracts), speculative or theoretical material or a brief article of editorial nature dealing with some problem in immunochemistry. Sufficient data or information must be presented to justify conclusions and must have the approval of one of the members of the Editorial Board. The third and fourth types of material will be Book Reviews and Comprehensive Critical Reviews of major problems of general interest. Both of the latter forms will usually be by invitation only, but the Editors will also consider volunteer contributions of this nature at any time.

The first two or three years of this publication will be considered a period of initial growth and development. Consequently, some changes will undoubtedly be made during this period and the Editors welcome suggestions for modification. During this period, the Journal will be published quarterly.

Since this Journal is intended for international participation by investigators in the field of immunochemistry manuscripts will be published in either English, French, German or Spanish. Pergamon Press will translate Russian manuscripts into English for review and if accepted, the publication will appear in English.

The contents of contributors shall be the sole responsibility of the Authors. Publication shall not imply the concurrence of the Editors or Publishers with the Authors' interpretations, conclusions or validity of data.

## Notes for Contributors

**Submission of manuscripts.** Manuscripts should be sent to one of the Regional Editors. Contributions from France should be sent to Professor Bussard; those from Switzerland and the British Isles should be sent to Professor Isliker. Manuscripts from other European countries, Australia and Africa may be sent to either of the above two Editors. Manuscripts from the Eastern United States, Eastern Canada, Mexico, and South America, should be sent to Professor Karush; those from the Western United States, Canada and Asia should be sent to Professor Campbell.

**Form of contributions.** Although manuscripts may be submitted in either English, French, German, Spanish or Russian, publication will be limited to the first four. Russian manuscripts will be translated and published in English if approved. All papers must have an accompanying abstract in English as well as in the language used for the article. All contributions must be submitted in typewritten duplicates and with lines at least double spaced and with margins which provide sufficient space for notations. Submission of three copies of the manuscript will facilitate refereeing and rapid publication. Manuscripts dealing with experimental work should be divided into major sections such as Introduction (optional), Experimental (with Materials, Methods and Results) followed by Discussion, Conclusions and Bibliography. If a large number of abbreviations are used, e.g., sRNA, EA, Ag, EEM, etc., it may be advisable to include a glossary defining such terms.

The title, with authors and their affiliations, should be placed on a separate page. On the same page give an abbreviated title to be used as a running headline.

**References** should be indicated consecutively as they appear in the text by superscript arabic numbers with parentheses, e.g. Franklin<sup>(1)</sup>. The full references should be cited in a numbered list at the end of the paper using the following style:

FRANKLIN E. C., FUDENBERG H., MELTZLER M. and STANWORTH D. R., *Pro. natn. Acad. Sci. U.S.A.* **48**, 914 (1962)  
SMITH R. T., *Advances in Immunology* (Edited by W. H. TALIAFERRO and J. H. HUMPHREY) Vol. 1, p. 67. Academic Press, New York (1961).

**Footnotes.** Statements or references which do not fit into the text of the paper or literature references may be noted by the following symbols: \*, †, §, starting afresh on each page, e.g., ... crystalline trypsin \*. Footnotes should be typed at the bottom of the page on which they appear.

**Tables.** All tabular material, flow charts, etc., should be typed on a separate manuscript page and should be intelligible without reference to the text. Headings should be concise, should clearly present the subject matter, and should be a part of the table. Footnotes to tables should also be placed on the same page and designations should use some system such as superscripts <sup>a</sup>, <sup>b</sup>, <sup>c</sup>, etc., instead of numbers.

**Graphs and illustrations.** Figures and illustrations should be included separately and not as part of the text. They should be about twice the published size and be clearly marked on the back as to top, number and author's name. Either the original or glossy prints may be used if care is taken in making good reproductions. Indicate on the manuscript where figures or illustrations should be inserted. Legends should be given on a separate page and clearly present enough information to make the figure understandable. The following standard symbols should be used on line diagrams:

▲   △   ▼   ■   ▽   □   ×   +   ●   ○

**General considerations.** It is important to all concerned that a manuscript be carefully read for errors and clarity before sending to an Editor.

**Reprints.** Fifty reprints of each paper are supplied by the publisher free of charge and will be sent to the first-named author. Additional copies in multiples of 50 can be obtained at reasonable cost if ordered before publication, and an order form for this purpose will be sent to the author.

**Proofs** will be sent to the first-named author for checking. *Corrections to the paper at this stage must be restricted to typographical errors.* Other than these, any substantial alterations may be charged to the author.
